Representative confirmed disagreements (evidence extracted verbatim from the source; markup removed for display)

htl_tbp JSON flag = 0 source = P (supported positive)

Evidence: “spiro-OMeTAD was prepared by dissolving 75 mg spiro-OMeTAD with 25 µl LiTFSI solution (520 mg in 1 ml acetonitrile) and 35 µl 4-tert-butylpyridine in 1 ml chlorobenzene. Hole transport layer was deposited on the annealed perovskite film by spin-”

Category: device use absent from the JSON (omission) (extraction) Paper: 10.1038/ncomms13503

pea_family JSON flag = 0 source = P (supported positive)

Evidence: “his work, 2D perovskite of the structure (PEA)2(MA)n–1PbnBr3n+1 has been sensitized, where PEA is phenyl ethyl-ammonium, MA is methyl-ammonium, and using only bromide as the halide. The number of the perovskite layers has been var”

Category: JSON formula '(PEA)2(MA)...' is not matched: the regex needs PEAI/phenethyl forms, not the bare PEA abbreviation (conversion) Paper: 10.1002/adfm.201604733

etl_dopant JSON flag = 0 source = P (supported positive)

Evidence: “. 18 In section 2.2, we discuss our results for Cs_2SnI_{6-x}Br_x films with different values of x. 2.2.1. Sn doped TiO2 layer as a photo-anode. Based on the conditions described above for synthesizing the light absorbing Cs2SnI6 layer, a fu”

Category: JSON 'Sn-doped TiO2' photo-anode is mapped to role 'contact' by role(), which is outside the etl_dopant scope (conversion) Paper: 10.1039/c7se00100b

carbon JSON flag = 0 source = P (supported positive)

Evidence: “tructured mixed halide perovskite solar cell ITO/PEDOT: PSS/CH3NH3PbIxCl3-x/PC71BM/ZnO/Al. (b) J–V characteristics at 0, 5, 10, 30, 50 min of light soaking. ![](_page_3_Figure_4.”

Category: JSON names PC71BM; the regex 'pcbm' does not match the PC71BM spelling (conversion) Paper: 10.1088/1361-6463/ab1626
